

# Accumulator placed in electrical cars

## Overview

---

The accumulator, also known as the power pack or battery, is a crucial component in an electric car. Without a reliable and efficient accumulator . This year, Wisconsin Racing (Formula SAE at UW-Madison) is building its first ever fully electric race car in addition to the combustion engine powered race car that it traditionally builds. Powering the electric race car is the accumulator, which is a custom-built lithium ion battery pack that . The Accumulator is the lifeblood of our EV; housing the battery pack, tractive system wiring, and associated control electronics. Drawing from previous VUB Racing experience, the objective is to create a foundational accumulator design to serve as a blueprint for subsequent years.
