

Argentina power plant energy storage project

Overview

Argentina's renewable energy sector is seeing a new wave of solar photovoltaic (PV) and battery storage development, as an emerging energy company builds a project pipeline of around 800 MW while aiming to reach 250 MW in operational capacity by 2026. Over 667 megawatts of energy storage capacity are headed for the Buenos Aires Metropolitan Area (AMBA), representing an investment exceeding half a billion US dollars. After securing capacity in the AlmaGBA auction, the company is positioning battery energy storage systems (BESS) as a central pillar for future growth in the Argentine power market. The duration of the batteries for this tender is 4 hours, which could bring the tender up to 2. The selected projects, representing over US\$540 million in investment, will be installed in the Buenos Aires .
