

Bosnia and herzegovina reduced carbon emissions

Overview

Over the past decade, total emissions have edged down only slightly-around half a percent per year-well short of the ~4% annual decline consistent with a net-zero-by-2050 global pathway. Within the mix, coal-related CO₂ has been easing, while oil-related CO₂ has crept up. The data will be updated - often on an annual basis - with the latest global and country emissions estimates. 9 megatonnes of CO₂-equivalent. This contrast underscores that national size and per-capita . What are the main sources of CO₂ emissions in Bosnia and Herzegovina?

Energy is responsible for the majority of climate change-causing greenhouse gas emissions, mostly from the burning of fossil fuels. Despite efforts to reduce these emissions, the trajectory of CO₂ emissions globally remains far . This paper provides an overview of the potential implications of introducing an emissions trading system (ETS) in Bosnia and Herzegovina (BiH).

[BiH's NECP: coal power plants to be shut, 2 GW of renewables installed](#)

He noted that BiH has accepted the obligation to prepare the NECP, reduce CO2 emissions and become climate neutral by 2050 by signing the Energy Community Treaty, the Sofia

Bosnia and Herzegovina's Progress and Recent Impact

Bosnia and Herzegovina's latest emissions total 26.9 megatonnes of CO2-equivalent. While this is a very small share of the global total, the footprint per person is 8.5 tonnes per capita

Carbon Border Adjustment Mechanism (CBAM) Handbook

The CBAM Handbook provides practical guidance on calculating the electricity emission factor in Bosnia and Herzegovina, supporting companies in independently assessing emissions and

Bosnia and Herzegovina

To reduce emissions and achieve increasing prosperity at the same time, we have to decouple economic growth from CO2 emissions. Several countries have achieved this in recent years.
