

# Can the base station use an external power supply

## Overview

---

➤ **Power Supply:** Base station CB radios require an external power source, typically 120V AC, or a suitable power adapter, unlike mobile units that rely on vehicle batteries. To operate continuously for more than a few hours without loss of power at the base station, provide external power. Sources of external power include: When you use an external power supply, the integrated battery provides a backup power supply, enabling you to maintain continuous operation through . I have the CBL 101 wiring harness that plugs into the round 9 pin on the bottom under the black EXT cover, on the other end attached the violet wire to the positive side of the 12v battery and the black, green and red to the negative. The RS2 operates for a day then the internal battery is dead and . A Subreddit Dedicated to the (462 MHz) GMRS Radio Community. The General Mobile Radio Service (GMRS) is a North American land-mobile FM UHF radio service designed for short-distance two-way communication. It requires a license in United States but can be used license-free in Canada. Without these two, nothing works. Radios used in radio communication, two-way radio, or land mobile radio (LMR) systems require . Most of the least expensive power supplies all seem to be made by one or two manufacturers so don't get hung up on a brand name as long as they get good reviews. The E-Ham website is a great place to read real world reviews.

## Can the base station use an external power supply
