

Canada maintains photovoltaic sites

Overview

While utility-scale solar leads the Canadian market, with 217 major solar energy projects producing power across the country as of January 2025, Bellissimo added that behind-the-meter solar is also picking up steam. In Canada, Photovoltaic (PV) technology has become a favoured form of renewable energy technology due to a number of social and economic factors, including the need to reduce greenhouse gas (GHG) emissions, deregulation, and the restructuring of electric power generating companies. The rapid growth . IEA PVPS Task 1 has published the National Survey Report of PV Power Applications in Canada 2024. The report provides a detailed overview of PV market development, policy frameworks, system prices, industry structure, and the role of PV in Canada's energy system during 2024. Since 2010 renewable energy capacity expanded significantly, and renewable and other low-carbon energy sources now account for a growing share of Canadian energy use. As of 2023, approximately one-sixth of Canada's end-use demand came from renewable energy. In 2001, there were more than 12,000 residential solar water heating systems and 300 commercial/industrial . Canada installed 314 MW of solar in 2024, bringing its cumulative installed PV capacity to more than 5 GW, says the Canadian Renewable Energy Association. See comments from CanREA's President and CEO, Vittoria Bellissimo.
