Overview

For a single energy system, such as pure photovoltaic or wind power, a base station needs to be equipped with a 5-7 day energy storage battery. By using a mix of renewable energy and conventional sources, hybrid systems balance the cost-efficiency of renewables with the reliability of traditional . In order to select an optimum combination for a hybrid system to meet the load demand, evaluations must be carried out on the basis of power reliability and system life-cycle cost. Then, based on the time of use electricity price and user fitness .
