

# Does the photovoltaic combiner box use a repeater

## Overview

---

The box takes the individual, high-voltage, low-current outputs from each of these separate strings and electrically joins them together in parallel. This device plays a significant role in both residential and commercial solar installations, particularly when . A PV Combiner Box is a device that brings together the output from multiple solar panel strings and channels it into a single output going to the inverter. It simplifies wiring, improves safety, and keeps your solar setup neat and manageable. You might wonder what a combiner box does in a PV system.
