

Energy efficiency mauritania

Overview

This fact sheet summarizes the climate, energy, and economic impacts of appliance energy efficiency improvements in Mauritania and contains recommendations for how to integrate net zero appliance targets into Nationally Determined Contributions (NDCs) 3. Total final consumption (TFC) is the energy consumed by end users such as individuals and businesses to heat and cool buildings, to run lights, devices, and appliances . Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic. The data presented in this factsheet are . The power mix is heavily fossil fuel-dependent, with renewables at 23% of electricity generation. - Carbon dioxide released from burning fossil fuels and industrial processes, measured in million metric tonnes. 0 covering the 2031-35 period (UNFCCC, 28/10/2025). The country commits to reduce its greenhouse gas (GHG) emissions by 75.
