

# Energy storage system commissioning outline

Our Lifepo4 batteries can be connected in parallels and in series for larger capacity and voltage.

## Overview

---

The commissioning process uses checklists, specifications, codes, standards, engineered drawings, and procedures to validate performance and to discover and correct problems before the system goes "online". System is Installed as designed and is verified operational. By interweaving business intelligence and data analytics best practices, we outline the critical steps required to successfully commission an energy storage system. Whether you are managing projects for grid-scale batteries or distributed energy storage systems, these best practices will help you . This report updates the previously published Energy Storage Integration Council (ESIC) Energy Storage Commissioning Guide 2018.
