

Home Microgrid Equipment

Overview

A home microgrid is a small, self-contained energy system that can generate, store, and manage its own electricity. It's typically connected to the larger utility grid but can "island"-or disconnect-and operate independently during outages or emergencies. They're a growing option for homeowners, businesses, and entire communities right here in Western New York. Clean, quiet, automatic resilience engineered for modern living. Backed by 20 years of monitoring and maintenance, our systems are built for long-term performance, energy independence, and . Building a residential solar microgrid is no longer a futuristic concept-it's an accessible, practical solution for achieving home energy independence, reducing electricity costs, and securing reliable power during outages.
