

How big an inverter do I need for two 540w photovoltaic panels

Overview

Generally, it's recommended to size the inverter to 80-100% of the DC system's rated capacity. Before determine the inverter size, the most important thing is to calculate your average daily power consumption (kWh) and calculate your solar panel array size to match your power . Choosing the right solar inverter size is critical-and one of the most common questions: what solar inverter size do I need?

Whether you are installing a rooftop system in California, powering a remote cabin in Alberta, or sizing for a community center in Rajasthan, getting it right means . Your inverter size should match your solar array's capacity, not your electricity bill. Let's say you have a 6kW solar array (twenty 300-watt panels). Expect to pay \$1,000 to \$3,000 to install a new solar inverter if your current one is undersized or oversized and causing power losses.
