

# How many types of solar power generation are there in China

## Overview

---

In the landscape of solar energy systems, China boasts a variety of solar power station types, each with unique technological frameworks and operational mechanisms. The two dominant forms include photovoltaic (PV) and concentrated solar power (CSP) systems. Its PV capacity crossed 1,000 gigawatts (one terawatt, 1 TW) in May 2025. Record Growth in PV Installations: In 2023, China installed 216.5% year-on-year. Amid a record amount of new solar capacity added in China in 2024, the share held by small-scale, "distributed" arrays fell to 38%, from 58% in 2022. The Chinese solar industry is at a pivotal point. Rapid solar capacity expansion overwhelms the grid, PV manufacturers compete for market shares, and then large target markets slap import tariffs on Chinese PV products, taking off their competitive edge. Environmental benefits and energy security .
