

# How much does it cost to buy an outdoor power supply in North Korea

## Overview

---

A small solar panel can reportedly be bought for around \$15-\$50, making it an attractive alternative to costly generators and batteries. Read the full analysis on 38 North. Interviews were conducted by 38 North staff in June and November 2022. "A typical 5kWh system in North Korea costs 40-60% more than equivalent systems in Southeast Asia due to supply chain complexities. Discover how renewable energy partnerships and cross-border logistics can meet your power needs in challenging environments. North Korea's outdoor power supply sector has seen gradual growth in recent years, driven by rising demand for decentralized energy solutions. 1 This shortage affects both urban and rural areas across the country, adversely impacting state-owned facilities, homes and even mobile phone connectivity, which has become . A typical installation of solar panels is simple: a solar panel on a roof or balcony is connected via regulator to a large battery. At night, the power from the battery can be harnessed to either directly power . Exclusive analysis of North Korea's cost of living (45/100): extremely high relative to quality and availability, with detailed insights for the few permitted foreign residents in 2024.
