How much does a wind farm cost?

Generally, O&M costs are estimated to be between \$20 to \$30 per kW annually, or approximately \$0. Commercial Projects Offer Best Economics: Utility-scale wind turbines at \$2.6-4 million each provide the most attractive financial returns with 5-10 year payback periods and capacity factors of 25-45%, significantly outperforming residential systems. Lastly, Statista reports that the global average installed cost for onshore wind power was . The cost of a wind turbine varies widely based on size and project specifics, but generally ranges from a minimum of \$15,000 for a small residential rooftop unit up to \$4 million or more for an industrial multi-megawatt utility-scale turbine, with most commercial installations averaging \$750,000 to . Access to electricity is 100% and supply reliability is generally high. However, the power sector remains heavily reliant on imported fossil fuels (322 GWh in 2023) sourced from coal and heavy fuel oil, contributing to financial vulnerability and high emissions. The Central Electricity Board . tion that by 2030, it will reduce its emissions by 30%. In 2016, the project was approved and Mauritius was among the first batches of countries to receive a . The Central Electricity Board (CEB), a government-owned entity in Mauritius under the Ministry of Energy and Public Utilities, established by the CEB Act of 1963, manages the generation, transmission, distribution, and sale of electricity across the country.
