Connection steps

Turn off the power: Before connecting, be sure to turn off the power. Get it wrong, and you might as well be hosting a DIY fireworks show. With the global energy storage market projected to hit \$546 billion by 2035 [1], knowing how to connect these systems safely isn't just a matter of convenience. High-voltage energy stored in capacitors can be discharged through a short circuit, which can result in an arc flash. An arc flash is a sudden release of energy that can cause severe burns, blindness, and even death. It may also damage your eyes, skin, or clothes. In the event of an accidental arc flash, this manual contains all the safety instructions for installation and operation of the ES25. Operation personnel must wear proper personal protective equipment (PPE). Before installing the device, check that the package contents are intact and complete against the packing list.
