

Improving the energy storage capacity of flywheel batteries

50KW modular power converter

Flexible Configuration

- Modular Design, Expanding as Required
- Small&Light, Wall Mounted
- Installed in Parallel for Expansion

Powerful Function

- Support PV+ESS
- Grid Support, Equipped with SVG Technology
- On-Grid and Off-Grid Operation

Reliable Protection

- Outdoor IP65 Design
- Sufficient Protection Functions Equipped

Overview

The lithium-ion battery offers the advantage of higher energy storage capacity over improved traditional battery chemistry, with the flywheel being able to offer 15 to 25 times the usable life expectancy. Pumped hydro has the largest deployment so far, but it is limited by geographical locations. A battery capable of repeatedly operating at 50kW delivery over a 30-minute duration over a life expectancy of over 100,000 cycles, is very competitive against lithium technology. A flywheel will offer 50 times to over 80 . This innovative combination leverages the rapid response capabilities of flywheels with the sustained energy output of batteries, addressing the diverse demands of modern energy applications. Flywheel energy storage systems have gained increased popularity as a method of environmentally friendly energy storage.
