

Inner Mongolia s first batch of photovoltaic energy storage projects

Overview

29, construction officially began on the large-scale new energy base in the central and northern areas of the Kubuqi Desert, Inner Mongolia, China, which is scheduled to be completed and put into operation by the end of 2027. The project is expected to add 1.6GW of capacity to the grid by 2025. The goal is to accelerate the energy transition and align with the national government's policies on climate mitigation. After the project is completed, it will be managed by Inner Mongolia New Vision Group. On Sep. 15, 2024, Inner Mongolia New Vision Group held a centralized groundbreaking ceremony for the first batch of independent new energy storage power station demonstration projects on the grid side in Inner Mongolia. The four projects, including the 160MW/320MWh project, passed grid-connected tests. SHANGHAI SERMATEC ENERGY TECHNOLOGY CO.

Inner Mongolia s first batch of photovoltaic energy storage projects

Inner mongolia shangdu energy storage

In 2016, China's National Energy Administration (NEA) suspended approval of new wind power projects in six northern regions, including Inner Mongolia, to avoid excessive curtailment.
