

Is the photovoltaic combiner box a mandatory product

Overview

A solar combiner box is not necessary for all PV systems, but it may be required for larger systems, or for systems that have a high voltage drop between the panels and the inverter. You need a combiner box when your photovoltaic system has more than three strings, systems with three or fewer strings can connect directly to . A solar combiner box is an electrical device that combines the output of multiple solar panels into a single DC (direct current) circuit. It is used in PV (photovoltaic) systems, and usually contains fuses or circuit breakers to protect the system from over-current conditions. People use it to join the power from many solar panel strings.
