

Modern communication technology base station

Overview

Equipped with an electromagnetic wave antenna, often placed on a tall mast, the base station enables communication between mobile terminals (such as mobile phones or pagers) and the fixed part of the digital telecommunications network. The following decades brought 3G, 4G, and now 5G technologies, which enabled the use of high-speed mobile internet, video streaming, and . A base station represents an access point for a wireless device to communicate within its coverage area. It usually connects the device to other networks or devices through a dedicated high bandwidth wire or fiber optic connection.
