These are precise, computer-aided design drawings (think AutoCAD or similar) that lay out everything for your PV system: panel placement, wiring routes, structural attachments, grounding/earthing, electrical flow, etc. projects, they must align with codes like the National Electrical Code . The block diagram above displays a solar panel measurement system. The system utilizes a voltage divider to measure voltage, incorporating a polar and non-polar capacitor to mitigate rapid voltage fluctuations during measurement. A photovoltaic system does not need bright sunlight in order to operate. Each panel is made up of many small cells that capture sunlight and, through a process called the photovoltaic effect, generate electrical current. Typically, these cells are made from .
