

# Photovoltaic superposition energy storage

## Overview

---

In simple words, it is a system that not only produces electricity thanks to solar panels but also stores it in dedicated batteries to be used when the sun is not shining. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. And it is precisely this ability to "store the sun" that is making storage a valuable ally for those seeking energy . For solar-plus-storage-the pairing of solar photovoltaic (PV) and energy storage technologies-NLR researchers study and quantify the economic and grid impacts of distributed and utility-scale systems. The EPRI-led project team designed and implemented a local . world will have 1 trillion watts of installed solar PV capacity by 2023. There are enormous potential and massive opportunities for energy investors; as well as for renewable energy supporters who are striving to achieve les of quantum mechanics in new ways to generate and process information.
