Overview

This manual contains critical information regarding electrical and mechanical installation and safety information which you should know before starting installation. Installation should only be performed by qualified personnel. Before installing a solar photovoltaic system, installers should mount the assembled support structures sections in the embedded sleeves. The Bottom Strut (D) must rest on the sleeve top to ensure levelling and alignment. Then carefully check the verticality, straightness, alignment and consistent levels before backfilling all sleeves with a 1:6 cement:soil mix. Please read this manual carefully before installing the system and carry out the installation procedures correctly. Be sure to follow OSHA guidelines. If you need assistance at any point in your installation or have suggestions on how we can improve your experience, call customer support at 1-800-819-7236 ext 556 or email us at support@tamaracksolar.com. This manual walks you through the basics of PV system installation, focusing on the practical steps from mounting modules to connecting the inverter to the electrical grid, and emphasizes the importance of ongoing maintenance to optimize system performance.
