## Overview

---

This article will introduce how to select an appropriate backup power supply to ensure the reliability of the communication base station. AJC Power Solutions provides tailored communication power solutions for base transceiver stations (BTS) and telecommunications infrastructures, ensuring seamless performance even in challenging environments. For base stations located in deserts or other extreme environments, independent power supply is essential, as these areas are not only . Green - The change has no immediate impact on working practices or has been aligned to current working practices - Communication via a monthly update of changed policy. NOTE: The current version of this document is stored in . The high-voltage electric power transmission is called the National Grid and transfers the power which is generated in the power stations: [coal , gas, nuclear, hydroelectric, etc ] to local substations which supply power at lower voltages to the various users : [commercial, industrial, domestic ] . In today's increasingly dense communication network coverage, the stability of base station power supply systems directly impacts signal transmission quality.

This includes standby generators and/or a high voltage three-phase traction power system as well as an uninterruptable power supply which can convert its DC output to AC when needed to prevent

### Engineering Equipment Specification 104/3

24V and 48V dc systems are used to power telecommunication, telecontrol, intertripping and switchgear control equipment associated with high voltage power circuits, which require a "no-break" supply.

### Communication Base Station Energy Solutions

Many remote areas lack access to traditional power grids, yet base stations require 24/7 uninterrupted power supply to maintain stable communication services.

Power lines are occasionally affected by lightning strikes, causing conductors, earth wires and/or supporting structures and the surrounding ground to rise in potential.
