

# Rooftop distributed solar installation energy storage

## Overview

---

Rooftop solar systems above 10kW would need to have 10 per cent battery storage and those between 15-20 kW would require 20 per cent. Imagine your house secretly moonlighting as a mini power station - that's essentially what distributed solar energy storage systems do. DER produce and supply electricity on a small scale and are spread out over a wide area. Unlike traditional solar setups that act like fair-weather friends, these . Rooftop solar energy can be distributed effectively by integrating systems, utilizing energy storage, identifying appropriate distribution methods, and adhering to local regulations.

### Integrating Building-Scale Solar

The installed system combined high-efficiency solar photovoltaic panels with battery energy storage managed through a microgrid controller that interconnects with the distribution grid.
