

Slovenia electric vehicle adoption

Overview

While the overall market growth is healthy, sales of battery-powered cars skyrocketed by 142% compared to last year, accounting for nearly 18% of all new cars hitting Slovenian roads this month. Like a number of central and eastern European countries, Slovenia is currently trying to accelerate its transition in order to be ready for the switch to all electric sales by 2035. The country currently has low levels of EV adoption, but has passed specific legislation with the goal of . The Slovenian new-car market posted moderate growth in 2024, with 53,018 passenger cars newly registered, +8. Despite this overall rise, electrified vehicles took a step backward as electric-only (BEV) sales slumped and hybrid technologies gained ground. The . Rapid growth in EV demand signals a broader shift toward greener mobility across the market. The surge was largely driven by a dramatic . Electric cars and trucks use an electric motor that is powered by electricity from batteries or a fuel cell, as opposed to traditional vehicles that use a gasoline or diesel-powered engine.
