

Solar Ion Grid System

Overview

An on-grid solar system, also known as a grid-tied or grid-connected solar system, is directly linked to the public electricity grid. It generates electricity using solar panels and supplies it to your home in real time. Grid-tied solar dominates the market for good reason: With 2025 system costs ranging from \$2. This means that electricity generated by the solar panels can be used to power your home or business, while any excess electricity can be fed back into the grid for others to . This system allows homeowners to generate electricity from solar panels while still having access to the grid for additional power when needed, maximizing energy savings and efficiency. The bi-directional net meter keeps a record of energy exchange: The net meter records the .
