

# Solar inverter and mains complement

## Overview

---

To connect solar power and mains light, it's essential to understand the systems involved and how they interact with each other. Choose appropriate solar components, 3. Solar power system consists of solar panel, solar charge controller and storage battery. The inverter and mains electricity intelligent switcher need to be installed if the output power source has access to 220V or 110V alternating current and compliment with mains electricity. Whether your project is a home battery backup, commercial energy storage rack, or EV-charging node, the inverter decides when to pull from the grid, when to push from solar, and when to . I have a very small home solar system comprising 50w 12v solar panel, 2x 12v Batteries, 500w inverter. This is a prototype excercise to assess viability.
