

# Solar power generation household number

## Overview

---

As of early 2025, nearly 5 million households (specifically, 4.7 million) have solar panels installed on their rooftops, according to a SolarReviews report. Homes, and the number is expected to climb to 15% by 2030 - about twofold within the next five years. The average US home uses about 11,000 kilowatt hours per year, meaning residential solar panels generated enough electricity. In the last decade, solar has grown with an average annual rate of 26 percent, reaching a capacity of over 138 gigawatts in 2023. The report is based on address-level data for 3. By comparison, we expect utility-scale solar capacity to grow. Adjust your electric bill to fine-tune your savings estimate and the recommended number of solar panels for your home.

## Solar power generation household number
