

# Solar power generation in summer nights

## Overview

---

Night-time in solar PV systems averages 16 hours, requiring significant storage or alternative generation to meet demand. Complementary strategies include wind power, load . The Stanford University researchers invented solar panels that can produce electricity at night by taking advantage of the phenomenon of radiative cooling. It is the transformation innovation for sustainable energy, especially for off-grid applications, at a very early stage. When sunlight hits . In most cases, direct sunlight is converted into electricity in one of two ways: using photovoltaic cells, which turn the sun's light into electricity using a semiconductor material that absorbs photons and releases electrons; or using solar-thermal turbines, which use the sun's heat to generate .
