

Solar power generation photovoltaic agent

Overview

A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Sunlight is composed of photons, or particles of solar energy. These photons contain varying amounts of energy. For purchasing, use the RP Photonics Buyer's Guide for photovoltaic cells. It provides an expert-curated supplier directory, buyer-focused technical background information, and structured selection criteria to support professional procurement decisions. The two dissimilar semiconductors possess a natural difference in electric potential (voltage), which causes the electrons to flow through the external circuit, supplying power to the load. Below, you can find resources and information on the topic.
