

# The bolts on the photovoltaic bracket base are too long

## Overview

---

Bolt brackets: Hand-tighten lag bolts first. Torque down: Crank to 35-55 ft-lbs (check manufacturer specs!). Critical: Missing the rafter reduces strength by 80%. Adjusting photovoltaic panel brackets isn't just about fitting modules on a roof - it's like tailoring a suit for your solar array. The right bracket length ensures: Did You Know?

A 2023 NREL study showed proper bracket adjustment increases energy yield by 12-18% compared to fixed-length systems. Most professionally installed residential systems using T clams have what works out to be 6 bolts holding 2 panels. Material: Priority is given to weather-resistant stainless steel screws or bolts to ensure that . The head of a 3/8 inch bolt slides into this slot allow the L brackets to be positioned anywhere along the rail. The holes are slotted to allow for a little adjustment.
