

# The electricity generated by one square meter of solar panels in Nepal

## Overview

---

It is estimated that one square meter of solar panels can generate around 20,000 kWh of electricity in a year, significantly helping energy-deficient areas by solving water shortages and reducing dependence on fossil fuels. The solar panel output by location calculator helps you understand how much energy your solar system can produce based on solar irradiance (kWh/m<sup>2</sup>/day), panel wattage, efficiency, and number of panels. Under optimal conditions (5 peak sun hours): At noon under direct sunlight: \*Note: 1m<sup>2</sup> . The answer lies in something most solar salespeople never properly explain- solar irradiance and your actual energy potential per square meter. On average, a square meter .
