

The relationship between battery bms and motor

Overview

Generally, the BMS has two modes - charging the battery and driving the application, or energy in and energy out. 'Energy in' covers charging and possible recuperation (charging by braking with motor), while 'energy out' covers the provision of electrical energy, to drive . The Battery Management System (BMS) is an electronic system that underpins the performance, safety and longevity of a rechargeable battery. A well-designed BMS can significantly enhance the vehicle's range by optimizing battery usage.
