

The solar inverter display screen flashes

Overview

Look for the green LED: when it is on, the system is producing power, if it is flashing, this means the inverter has AC power and is in Standby mode. Press and quickly release the green button to activate the LCD screen, repeat until the screen appears. Your solar inverter display is the control center of your energy system, revealing real-time data about power generation, battery health, and potential faults. (e.g., weather, shaded solar panels), utility grid, or other system errors. Not all errors or error codes imply a production problem.
