

**There is no current in one path
of the solar inverter**

Overview

If there is voltage on the input side of the inverter but no output side voltage, there is most likely an inverter problem. If the input side voltage and current from the PV system array are operating at a reduced level, the problem is most likely with an array string or . These sophisticated devices play a crucial role in converting the direct current (DC) electricity generated by solar panels into alternating current (AC) power usable by your home. Your solar inverter is the brain and heart of your PV system. However, like any electrical device, they can face technical issues that impact performance. Many problems can be easily diagnosed and fixed. Microinverters - Installed .
