

Transmission nodes use Australian racks with a power output of 150kW

Overview

This dataset contains information relating to the topology of Australia's largest electricity transmission network, along with details pertaining to the technical and economic characteristics of generators operating within this grid. High voltage transmission lines transport electricity from . In the spirit of reconciliation, the Transgrid Group acknowledges the Traditional Custodians of the lands where we work, the lands we travel through and the places in which we live. It ensures clean energy reaches consumers efficiently and reliably, while also supporting Australia's shift to a low-carbon economy.

[Robustness analysis of electricity networks against failure or attack](#)

The NEM is the world's longest interconnected power system, with an end-to-end distance of over 5000 km between the state of Queensland in the north and the state of South Australia. Our

National Electricity Market

The NEM operates on one of the world's longest interconnected power systems - from Port Douglas in Queensland to Port Lincoln in South Australia - a distance of around 5,000 kilometres.

Strengthening energy future with transmission infrastructure

Transmission infrastructure is essential to the integration of renewable energy sources by connecting wind and solar farms to the grid. It ensures clean energy reaches consumers efficiently and reliably,

AEMO , Transmission augmentation information

A transmission augmentation project is a project to expand the transmission system or to increase its capacity to transmit electricity. AEMO expects to update the workbook approximately every 6 months.

Understanding Australia's Electricity Network

To enable this to happen across state borders, the NEM uses special transmitting lines known as interconnectors. These are the large cables that transmit electricity between states. Some

Distribution and Transmission Annual Planning Report

Ausgrid owns, develops, operates and maintains transmission dual function assets in NSW that are operated in parallel with Transgrid's network, and perform a transmission function by supporting the

2025 Transmission Annual Planning Report

Transgrid is supporting the Hunter Transmission Priority Transmission Infrastructure Project to reinforce supply to the region from the north and facilitate power flows to Sydney from Central West Orana and

Australia's Energy System

High voltage transmission lines connect Australia's eastern states, South Australia and the Australian Capital Territory. This is referred to as the National Electricity Market (NEM).
