

# What are the blocks that hold down the photovoltaic panels

## Overview

---

A solar ballast is a special-purpose concrete block that is used to help install solar panels either on the roof or ground. Designed for developers and EPC contractors, these modular units replace traditional piled foundations with a stable, reusable base that performs across a wide . Do you need to hold down ground mounted solar panels?

Conigliaro Block manufactures all types of precast concrete solar ballast blocks used to securely mount and position solar panels. The solution?

4" x 8" x 16" Solar Ballast Block - 30 Piece units. These durable, easy-to-install blocks are designed specifically to . The Solar Panel Ballast Blocks provided by RCP Block & Brick are a durable and simple way to add ballast weight to your solar panel array. Traditionally, solar panel and array installations require attaching mounts directly to a home's roof or the ground by drilling and cutting into it.
