

# What can solar panels do to generate electricity

## Overview

---

They use this sunlight to create direct current (DC) electricity through a process called "the photovoltaic effect. At a high level, solar panels are made up of solar cells, which absorb sunlight. " Because most appliances don't use DC electricity, devices called inverters then convert it to . Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. Think of them as silent, stationary power plants that require no fuel, produce no emissions, and work for decades with minimal maintenance.
