

What is rooftop solar power generation

Overview

A rooftop solar power system, or rooftop PV system, is a photovoltaic (PV) system that has its electricity -generating solar panels mounted on the rooftop of a residential or commercial building or structure. [1] The various components of such a system include photovoltaic modules, mounting . Rooftop solar power has transformed from a niche technology into a mainstream energy solution, with over 4. 4 million American homes now powered by solar panels. This can be used to meet the building's own energy consumption requirements or, in certain situations, ending on its nd the energy supply requirements. An indic nsistently between 2006 and 2012.
