

What is the current direction of the battery cabinet

Overview

Current Direction: The flow of current is defined as the direction in which positive charges move. Since electrons carry negative charge, current flows from cathode to anode within the battery and from anode to cathode through the external circuit. reduces the battery cabinet's latent electrical shock intensity. This allows a minimization of the required high voltage protective gear needed to be worn by maintenance per NEC Table 310. 16 and/or all applicable national and local codes are located in the front, rear, and top of the .
