

Where to use solar energy to generate electricity in China

Overview

In December 2018, a 500 MW solar project in Qinghai became the first in China to sell electricity for less than the benchmark price for electricity from coal. 54 As a result of the dramatic scale-up in manufacturing, solar PV in China now costs less than coal-fired . Wind and solar surpassed a quarter of China's electricity generation for the first time in April 2025. China is the largest market in the world for both photovoltaics (PV) and solar thermal energy. Its PV capacity crossed 1,000 gigawatts (one terawatt, 1 TW) in May 2025. [1] . Coming online nearly a year ago to date, the Xinjiang solar plant has produced an estimated 6. 09-billion-kilowatt hours of electricity, enough to power every home in San Francisco, Boston, and Washington D. Rapid construction of photovoltaic (PV) solar . Programs such as "Made in China 2025" and "Green Energy" are aimed at stimulating the production of solar panels, as well as the installation of solar power plants in different regions of the country. - China is also actively developing government subsidies, tax breaks and financial mechanisms to . Utility-scale solar and wind power capacity in the top ten countries broken down by status, in gigawatts (GW) Source: Global Solar Power Tracker, Global Wind Power Tracker, Global Energy Monitor Data includes solar project phases with capacity of 20 megawatts (MW) or more and wind project phases . The Chinese solar industry is at a pivotal point. Rapid solar capacity expansion overwhelms the grid, PV manufacturers compete for market shares, and then large target markets slap import tariffs on Chinese PV products, taking off their competitive edge.

Where to use solar energy to generate electricity in China

Solar power in China

Most of China's solar power is generated within its western provinces and is transferred to other regions of the country. In 2011, China owned the largest solar power plant in the world at the time, the

China , Energy Trends , Ember

"With decades of sustained policy support, China is now championing the global cleantech revolution, leading in both domestic deployment and world production across sectors like solar

[China View: Desert Solar Farms Are Redefining The Energy Landscape](#)

Across the autonomous regions of Tibet and Xinjiang, and Inner Mongolia and Qinghai provinces, solar construction projects have doubled China's solar electric generating capacity from

China's solar capacity installations grew rapidly in 2024

China has more utility-scale solar than any other country. The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility
