Overview

Solar panels produce about 40-60% less energy in December and January compared to July and August. The stretch from September 21st to March 21st gives you around 35% of your yearly solar output. Understanding how solar panels work and the factors that affect their efficiency helps explain their performance during colder months. Solar panels convert sunlight into electricity using photovoltaic cells . Winter means more cloudy days, rainy and snowy days. The sunlight exposure hours for the solar panels considerably reduce to a large extent. While many assume that snow drastically reduces performance, the truth is more .
